

SUMMIT CARBON SOLUTIONS, LLC

PETITION FOR HAZARDOUS LIQUID PIPELINE PERMIT

Docket No. HLP-2021-0001

EXHIBIT K

Board Rule 13.3(1)(k) requires that an Exhibit K to a petition for pipeline permit include the following, each of which is addressed in turn:

- (1) An affidavit affirming that the company undertook a review of land records to determine all affected persons for all parcels over which the pipeline is proposed to be located before easements were signed or eminent domain requested.**

Attached to this Exhibit K is an affidavit affirming that the company undertook a review of land records to determine all affected persons for all parcels over which the pipeline is proposed to be located.

- (2) Whether any private easements will be required for the proposed pipeline and, if a private easement is anticipated to be required, when the easement negotiations will be completed and whether all affected persons associated with the property have been notified.**

Private easements will be required for the proposed pipeline. Negotiations for easements are currently on-going and will continue until all lands necessary for the construction of the pipeline are acquired, either by voluntary easement to the extent possible or by eminent domain where necessary. All affected persons associated with the relevant properties that Summit Carbon Solutions, LLC (“Summit Carbon”) is aware of have been notified.

- (3) Whether there are other permits from state or federal agencies that will be required for the construction of the pipeline.**

In addition to the pipeline permit from the Iowa Utilities Board, in Iowa Summit Carbon will work with the Iowa Department of Natural Resources (“IDNR”) and Iowa Department of Transportation (“IDOT”) to ensure that any crossings of public lands and/or roads are properly permitted.

Outside of Iowa, the pipeline system traverses four other states: Minnesota, North Dakota, South Dakota, and Nebraska. Where required by each of those state’s respective laws, a permit will be sought from the appropriate regulatory body in each of

those states. Also, a Class VI permit will be sought from the North Dakota Industrial Commission's Oil and Gas Division for the sequestration of the carbon dioxide delivered through the pipeline system.

In addition to state permits, Summit Carbon will coordinate with the U.S. Army Corps of Engineers ("USACE") to ensure jurisdictional crossings are properly permitted.

(4) Whether there are any agreements or additional facilities that need to be constructed to transport or receive hazardous liquids.

Aside from the pipeline system, two primary types of additional facilities will be constructed in connection with the project: (1) pump stations along the route; and (2) sequestration facilities in North Dakota.

(5) Projected date when construction of the pipeline will begin.

Summit Carbon intends to begin construction of the Project in the first quarter of 2023.

AFFIDAVIT OF JESS VILSACK

STATE OF IOWA

ss:

COUNTY OF STORY

I, Jess Vilsack, state under oath as follows:

1. I am General Counsel of Summit Carbon Solutions, LLC (“Summit Carbon”), the Petitioner in the above-captioned matter.

2. Pursuant to Board Rule 13.3(1)(k), Summit Carbon undertook a review of land records to determine all affected persons for all parcels over which the pipeline is proposed to be located prior to entering into any agreement to obtain rights in land for the siting of the pipeline. More specifically, Summit Carbon engaged a specialized data vendor that obtained names and addresses of property owners to provide notice of county informational meetings. After completing its county informational meetings, Summit’s land acquisition contractors have engaged in multiple forms of outreach to landowners to collect information to determine the identities of all

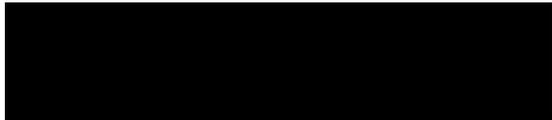

landowners, tenants, and other interested parties with respect to properties over which the pipeline is proposed to be located. In addition, as part of the negotiation process to obtain easements, Summit Carbon's land acquisition contractors confirm with the landowner information regarding interested parties, and conduct a review of land records applicable to the property to confirm the identities of interested parties prior to entering into an agreement to obtain rights in the property for the siting of the pipeline.

Further Affiant Sayeth Not.

Jess Vilsack
General Counsel, Summit Carbon Solutions, LLC
